

Adding ^{11}C -acetate to F-18 FDG at PET Examination Has an Incremental Value in the Diagnosis of Hepatocellular Carcinoma

PET ile F-18 FDG ye ilaveten ^{11}C -asetat Görüntülemesinin de Yapılmasının Hepatoselüler Karsinom Tanısını Arttırıcı Etkisi

Erratum to: We apologize for unfortunate error in Table 2, please find the correct version below

Table 2. Matrix analysis showing number of positive PET-examinations using FDG and ^{11}C -acetate in 44 patients with hepatocellular carcinoma (HCC). For statistical analysis (c.f. Results) McNemar's test was used

		^{11}C -acetate		Total
		+	-	
FDG	+	8	5	13
	-	26	5	31
Total		34	10	44
